DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 22-24 is withdrawn in view of the newly discovered reference(s) to Bekritsky et al (Bekritsky), U.S. Patent No. 7,030,812. Rejections based on the newly cited reference(s) follow.

2. Claims 1-21, 26-28, 30, 31 and 33-41 are allowed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 22-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Bekritsky.

Regarding claim 22, Bekritsky discloses a method of radiolocation using time difference of arrival, comprising determining the times of arrivals of wireless transmissions from timestamped sets of samples of signals received at a plurality of

stations of a wireless network and sent by the stations to a processing entity (col. 3, lines 20-45).

Regarding claim 23, Bekritsky discloses a method as recited in claim 22, further comprising determining time differences of arrival from the determined times of arrival and from transmit timestamps sent by transmitting stations to the processing entity (col. 3, lines 20-45).

Regarding claim 24, Bekritsky discloses a method as recited in claim 22, wherein determining the times of arrival includes for each set of captured samples, correlating the timestamped sets of samples with a reference signal that represents at least part of the signal expected to have been received at each station and deconvolving the timestamped sets of samples of signals (col. 3, lines 30-45, col. 4, lines 51-64).
